

## rSOC

The Alberta Regional Security Operations Center (rSOC) is being developed by Cybera in conjunction with the province's 26 post-secondary institutions. Our goal is to build a robust and sustainable cybersecurity operations centre that is geared towards security event monitoring and detection. To do this, Cybera will be partnering with AARNET (Australia's national research and education network, which has been operating a national SOC since 2020). We will be providing an update to the Feb. 22 workshop attendees about this initiative, and how they can expect to benefit from the rSOC.

## CanSSOC

Cybera is partnering with the Canadian Shared Security Operations Centre (CanSSOC) to build a national cybersecurity operations centre that is geared towards security event monitoring and detection of the national Research and Education Network and its 200+ connected institutions. We will be providing an update to the Feb. 22 workshop attendees on how this initiative is progressing, and Cybera's role in its development.
